Known incompatible / not supported devices

DEVICE	PLATFORM	TESTED SOFTWARE	CUSTOMER STATUS	NOTES
iPhone 16e	iOS	Not recorded	**Not compatible**	Failed Tactus validation; do not claim or deploy as Tactus-compatible.
Google Pixel 9	Android	Android 14 / Android 16	**Not supported**	Failed Tactus validation; outside current published support scope.
Samsung Galaxy S26 FE	Android	One UI 9 / Android version not recorded	**Not compatible**	No video output through Tactus during validation on September 27, 2026.

Compatibility notes

Standard setup reminders

+ iPhone requires keyboard and mouse. Disable Face ID for iPhone Unlock, enable AssistiveTouch, and choose Headphones on first connection.
+ iPhone 18 Pro: on the first Tactus connection of the day, unlock the phone directly to enable USB devices; after that, deskset unlock works.
+ Samsung supports deskset touch, keyboard, and mouse. Turn off Auto Start when HDMI is connected under Samsung DeX before use.

Ordering and deployment use

+ Devices in the validated table are supported only in the configurations shown.
+ Samsung Galaxy S26 is validated; Galaxy S26 FE is not compatible.
+ If a device is not listed in either section, treat it as pending evaluation until Conceras confirms compatibility.
+ Carrier variants, regional variants, and major OS or UI changes may require revalidation even within the same phone family.
+ One UI 9 / Android 17 validation is recorded for Galaxy S23 Ultra, S26, and S26 Ultra. Carrier, region, and device codes for these tests were not supplied.

Prepared from current Tactus validation records and current Tactus setup guidance as of October 20, 2026.
